## RESULTS BY THE NUMBERS

**15 minute** door-to-balloon time

**Baystate Medical Center** in Massachusetts achieved a door-to-balloon time of 15 minutes by customizing e-Bridge for intaking STEMI patients. "This is a historic record for Baystate Health," said ACS/STEMI program coordinator Alina Capatina.

• **15 minute (20%) door-to-needle time decrease, and 2.4 minute (29%) door-to-physician time improvement**

**Southeast Health Medical Center** in Alabama decreased their door-to-needle time, improved their door-to-physician time and became a Certified Comprehensive Stroke Center in part by using e-Bridge and CAREpoint to manage all EMS-related activities, including prehospital stroke notifications and creating an overhead paging system for case alerts. GD's solutions "connect the dots for our Stroke Team and enhance internal communication between team members," said stroke program coordinator Ramona Johnson.

*Schedule a conversation to learn about how GD can build telehealth services specifically for your organization to provide the greatest possible ROI.*

**40% decrease** in false activations **HCA Chippenham** in Virginia decreased false activations by expanding their use of e-Bridge and CAREpoint to all teams.

**\$8,000/year savings** in forms **AMITA Health St. Joseph Hospital** in Illinois saved \$8,000 annually by using the forms features in their CAREpoint and cancelling their third party forms solution. AMITA has long-relied on what EMS system coordinator Philip Laier describes as GD's "constant reliability."

**Northwestern Medicine Central DuPage Hospital** in Illinois reduced their average radio call to 2.5 minutes and reduced nursing staff hours by monitoring trends, ultimately **saving 14.5 hours per month** of patient care time with their e-Bridge and CAREpoint."
